

DuraDocument Paper

Synthetic Media

Xerox DuraDocument Paper is an advanced digital print media made from a tri-laminate construction. A thin layer of polyester is sandwiched between two layers of paper resulting in a print media which looks like paper but is totally tear resistant.

This product is ideal for applications which require a durable solution – like luggage tags or quality clothing tags, and high value concert tickets.....the possibilities are endless!

Xerox DuraDocument Paper enables short runs, print on demand and variable data printing - all without the set up costs of traditional off-set printing.

Features and Benefits

- Tear resistant
- Good toner bonding and image quality
- Feels like paper
- Documents can be archived for many years
- Can be die cut
- Can be hole punched & placed in a ring binder
- Can be offset pre-printed

Equipment Compatibility

- DuraDocument Paper is compatible with the Xerox DocuColor iGen3, DC8000, DC6060 and DC250. However, different results may be achieved according to the volumes being printed and the design of the artwork.
- A test sample should be run to ensure that the result is acceptable.
- Refer to your Xerox Supplies contact for details of how to run.

For more information contact your Xerox Supplies Representative.
